New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis

720 3030

S N Result

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly office and in humans. (II) is also used as infections, particularly office media in humans. (II) is also used as carried in mununoasys for detecting specific antibodies (Ab), and to affice an probes for identifying/Cloing 200 kDa protein fragments are used as probes for identifying/Cloing 200 kDa protein fragments are used as probes for identifying/Cloing 200 kDa protein fragments are used as probes for identifying/Cloing 200 kDa protein fragments are used as probes for identifying/Cloing 200 kDa protein fragments of truncated versions of (II) reduces toxicity of the protein Expression of truncated versions of (II) reduces toxicity of the protein constants the Escherichia coli host. The present sequence represents the manual carrier invention.

M. catarrhalis strain OB 200kDa gene, which is given in the exemplification of the present invention. English 247pp; 1; Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kpa outer membrane protein of Moraxella catarrhalis. The 200 kpa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the minor of the contraction of the protein coll to can be contracted to the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction of the protein contraction contracti

The present invention describes an isolated and purified nucleic acid (I)
that encodes a 200 kba outer membrane protein of Moraxella catarrhalis.
that encodes a 200 kba outer membrane protein of Moraxella catarrhalis.
The 200 kba outer membrane protein (II) has antibacterial activity and
can be used in vaccines. (II), and its truncated versions, are used as
immunogenic compositions and vaccines to protect against M. catarrhalis
immunogenic compositions and vaccines to protect against M. catarrhalis
cantigen in immunoasays for detecting specific antibodies (Ab), and to
antigen in immunoasays for detecting specific antibodies (Ab), and its
generate Ab. (I) are used for recombinant production of (II) and its
canning as probes for identifying/Cloining 200 kba protein
fragments are used as probes for identifying/Cloining 200 kba protein
canning application of large amount of recombinant immunogens.
Clomates possible production of large amount of recombinant immunogens.
Charcaston of truncated versions of (II) reduces toxicity of the protein
towards the Escherichia coli host. The present sequence represents the
constant and the present invention.
Cexemplification of the present invention.
                                                                                                                                                                                                                                                                        20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1.255

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acgccaaatcccacagcacggggggggggggtagctgtgctacagggcaagttggcag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              c DNA fragment (T38740) of Moraxella catarrhalis otitis rein 4223 includes the coding region for a 1992-amino tein (W04505) identified as an approx. 200 kDa outer protein (OMP). The DNA was isolated from a strain 423 library in phage lambda EMBL3 by screening with an kDa protein guinea pig antiserum. The gene can be the recombinant expression of the OMP (for use in ), for the prepp. of hybridisation probes, or may be ated into a live vector for use in direct immunisation.
                                                                                                                                                                                                                                                                                   brane protein; OMP; immunogen; vaccine; otitis media;

protein,

membrane

outer

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly offitis media in humans. (II) is also used as antigen in immunoasays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis strain 423 lambdabEmblas clone 200kba gene, which is used in the exemplification of the present invention. 2A-W; 247pp; English Fig 3, Example

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28554). The library has a number of uses described in the Specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial form of human upper airways. M. catarrhalis is known to cause acute, localised infections such as ottics media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis

```
The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly outtis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the M. catarrhalis strain 423 lambdaEmBal3 clone 200kba coding sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                      gaaattggtcaaacaaacaagataaacaacacgctgaaaggcgatgccctagcgacaggt

that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis.

The 200 kDa outer membrane protein (I) has antibacterial activity and the can be used in vaccines. (II), and its truncated versions, are used as can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as infections, particularly otitis media in humans. (II) is also used as infections, particularly otitis media in humans. (II) is also used as infections as protes for recombinant production of (II) and its generate Ab. (I) are used for recombinant production of (II) and its generate Ab. (I) makes probes for identifying/cloning 200 kDa protein fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for identifying/cloning 200 kDa protein consersation of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the complification of the present invention.

C exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    235

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarhalis infections, particularly ofitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       outer membrane protein,

that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents a M. catarrhalis strain 423 200kba partial nucleotide sequence, which is

                                                                                                                                                                                                                                                                                                      The present sequence represents a Haemophilus influenzae adhesin (Hia)

gene from the non-typeable Haemophilus influenzae (NTHi) strain M47.

gene from the non-typeable Haemophilus influenzae (NTHi) strain M47.

Ha genes and proteins have antiinflammatory, auditory and antibacterial

activities, and can be used in the production of a vaccine. An

activities, and can be used in the propaptide la useful for inducing

by an Hia gene, or a recombinant Hia polypeptide is useful for inducing

by an Hia gene, or a recombinant Hia polypeptide is useful for inducing

protection against disease caused by Haemophilus strains in a

protection against disease caused by the infection of Haemophilus

for other immunogenic preparations including vaccines, as a carrier

antigen, in immunogenic preparations including vaccines, as a carrier

for other immunogenic acused by the infection of Haemophilus

influenzae such as meningitis, epiglotitis, septicaemia and ottics

media. Recombinant production of Hia favours high recovery of the

media. Recombinant production of Hia favours high recovery of the

protein compared to the low recovery of native protein from Haemophilus

influenzae species. A truncated protein has a significantly higher

amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;

The present sequence represents a Haemophilus influenzae adhesin (Hia)

Gene from the non-typeable Haemophilus Influenzae (NTH1) strain 33.

Gene from the non-typeable Haemophilus Influenzae (NTH1) strain 33.

Gene from the non-typeable Haemophilus Influenzae (NTH1) strain 33.

Activities, and can be used in the production of a vaccine. An activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide concoded immunogenic composition and Haemophilus strains in a protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier antigen, in immunogenic preparations including vaccines, as a carrier for useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglotitis, septicaenia and otitis media. Recombinant production of Hia favours high recovery of the meninging of the infection of protein compared to the low recovery of native protein from Haemophilus in the species. A truncated protein has a significantly higher
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     aaatetgaeggeacageaggtacaaceaceecageaggtgecaeaggtaeggttaaagge 5736

The present sequence represents a Haemophilus influenzae adhesin (Hia)
gene from the non-typeable Haemophilus influenzae (NTH1) strain K9.
Hia genes and proteins have antiinflammatory, auditory and antibacterial
cutivities, and can be used in the production of a vaccine. An
immunogenic composition comprising an Hia gene, a polypeptide encoded
by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
protection against disease caused by Haemophilus strains in a
susceptible host, preferably a human. An Hia protein is useful as an
antigen, in immunogenic preparations including vaccines, as a carrier
for other immunogens, and in the generation of diagnostic reagents. Hia
is useful for treating diseases caused by the infection of Haemophilus
influenzae such as meningitis, epiglottitis, septicaemia and otitis
media. Recombinant production of Hia favours high recovery of the
media. Recombinant production of Hia favours high recovery of the
protein compared to the low recovery of native protein from Haemophilus
influenzae species. A truncated protein has a significantly higher
amount of recovery than a full-length protein.

gene from the non-typeable Haemophilus influenzae (NTHI) strain K22.

gene from the non-typeable Haemophilus influenzae (NTHI) strain K22.

Hia genes and can be used in the production of a vaccine. An activatives, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, a polypeptide is useful for inducing by an Hia gene, a polypeptide is useful for inducing protection against disease caused by Hemophilus strains in a protection pagainst disease caused by Hemophilus strains in a mannogenic preparations including vaccines, as a carrier antigen, in immunogenic preparations including vaccines, as a carrier of for other immunogens, and in the generation of diagnostic reagents. His for other immunogens, and in the generation of diagnostic reagents. His is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and ofthis media. Recombinant production of Hia favours high recovery of the compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher mount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids containing electron-transfer group, useful as labels in hybridization assays, e.g. for genotyping, allowing repeat analyses on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                681
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a composition comprising two nucleic acids each containing an electron-transfer group (ETM) having different redox potentials. The invention is used for electronic detection of nucleic acids, especially of substitutions (mismatches) and single-nucleotide polymorphisms, e.g. for genotyping,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        6097 atcaatggttcagccgatacccaaggccatgtaggggcggcagttggtgcaggtttcac 6156 | 6097 atcaatggttcagccatgtaccac 6156 | 6097 atcaatggtaaaacaggcgttgcagcaggtgttgcagcaggtaacaaggtaaaacaggcgttgcagcaggtgttggttagcag 3322
